

Quality Bytes TelXpress

Quality Bytes TelXpress

Pure IP telephony system supporting a wide range of applications, protocols, telephony devices, softphones and security standards.

- **100% Pure IP** – Based on Asterisk. Built from the ground up as an IP PBX
- **Fully interoperable with PSTN** (teleco) lines including analog and digital PRI/BRI
- **Organizational features** – Unified messages, group based policies, partitions and much more
- **IT-Interoperable** – Features APIs for receiving commands and triggering events from IT/ERP/CRM systems

Telephony Features

The TelXpress system represents a single-box straightforward PBX solution with one central management system. Other PBX systems, both ‘traditional telephony’ and IP PBX system require tedious, complex configuration and integration of multiple vendors, boxes and software components.

- Built-in support for remote IP phones and softphones
- Fax2Mail service allowing faxes to be received to e-mail
- Inbound/Outbound call recording
- Voicemail including a voicemail to e-mail connector
- Multiple-depth IVR
- Conference rooms (capable of conducting 10-party conference calls)
- Music on Hold capable of playing MP3 sound files
- Call Data Record (CDR)
- Inter-site connectivity, inter-PBX connectivity
- TAPI Dialer – Dial from Outlook and many other TAPI enabled applications
- Connects to SIP VoIP providers to conduct low-rate international calls
- Extends existing (legacy) PBX systems
- Many more features

TelXpress supports a large variety of softphones and IP phones
 *SNOM * YEALINK * TECOM * CISCO * X-LITE * NOKIA * SJPhone * Grandstream

- Bandwidth Management

Quality Bytes has 10 years of expertise in data security and communications through the development of the ServerXpress security appliance

Using the TelXpress system, users can be connected from the Internet through a softphone or an IP phone to the PBX as an ordinary extension. Once connected, remote extensions can receive and originate calls as if they were placed near the PBX. Quality Bytes ServerXpress provides a security system (firewall) and bandwidth management to prioritize (and possibly reserve) the required bandwidth for internet based VoIP telephony.
